

Print this sheet in "Landscape" mode, and set the print quality to high.

Apply double-sided tape over the tops of the yellow screws shown in the diagram. Then, after removing a screw from the camera, stand the screw on it's head on the correct yellow screw location on the diagram. The tape will help secure the screws should you need to move the paper.

Note:
The screws shown in the diagram are at 100% scale. The camera outlines are at approximately 70% of the actual scale.
